WHAT CAUSES BRAKE DUST?

Fortunately, brake dust is not a sign your brakes are failing. It's simply the result of different materials being used on today's brake pads. Over the years, the formulation of brake pads has changed as vehicles get lighter and environmental concerns grow.

Unfortunately, brake pad wear is unavoidable, and brake dust is a by-product of brake wear. When your brake pads heat up, their metallic particles get a static charge as they wear off the surface of the pad.

In asbestos brake pads, the accumulation of brake dust on the wheels is less because the worn brake dust is released into the air. Asbestos use is banned in most countries because it is a highly carcinogenic substance. When it enters the body through respiration, it causes various diseases, especially cancer.

Gynansakda, tormoz kolodkalaryň iýilmeginiň öňüni alyp bolmaýar. Olaryň iýilmegi netijesinde tormoz tozanlary emele gelýär. Siziň tormoz kolodkalaryňyz gyzanda olaryň metal bölekleri kolodka sürtülip magnetik güýç ýygnaýar we diska ýelmeşýär.

Asbestli tormoz kolodkalarynda tormoz tozanlarynyň howa zyňylmagy sebäpli tigirde tormoz tozanlarynyň ýygnalmagy az bolýar. Asbestiň güýçli kanserogen madda bolanlygy sebäli onyň ulanylmagy köp ýurtlarda gadagan edilen.
